

## Protection of Biodiversity - Portugal

On November 22, pupils from the 1st cycle of the Moure School Center attended a lecture on Biodiversity Protection.

Mr. Francisco, from the Bird Recovery Center of the Peneda Gerês National Park, brought with him two beautiful specimens recovered by the center: an ordinary owl, which aroused the curiosity of all and was the motto to explain its importance in the balance of the ecosystem, and an adult goshawk, which at the end of the lecture, was released to freedom, two years after starting the recovery.
